

SMARTOPS AI WORKFLOW

End-to-End Workflow

Workflow Overview

The SmartOps AI workflow begins when an incident occurs and ends with automated RCA generation.

Step 1 – User Input

User provides:

- GitHub Repository URL
- Incident Description

Example:

Repository:
payment-service

Incident:
Users unable to complete payments

Step 2 – GitHub Analysis

GitHub Agent collects:

- Commit IDs
- Commit Messages
- Changed Files
- Timestamps

Example:

Commit:
abc123

File:
config/db.py

Change:
50 → 10

Investigation Workflow

Step 3 – Log Analysis

Log Agent fetches:

GET /logs
GET /failures
GET /status

Sample Logs:

ERROR Database Timeout

ERROR Pool Exhausted

ERROR Payment Failed

Step 4 – Incident Analysis

Incident Agent determines:

- Service Impact
- User Impact
- Severity

Example:

Affected Service:
Payment Service

Severity:
Critical

Step 5 – Correlation Process

Investigation Engine combines:

GitHub Commits

+

Runtime Logs

+

Incident Details

Result:

Deployment

DB Config Change

Pool Exhausted

Database Timeout

Payment Failure

RCA Generation Workflow

Step 6 – Historical Incident Retrieval

RAG searches:

Historical RCA Reports

Previous Incidents

Past Fixes

Returns:

Similar Incident Found

Similarity Score: 92%

Step 7 – Gemini RCA Generation

Gemini receives:

- Logs
- Commits
- Timeline
- Historical Incidents

Generates:

Executive Summary

Root Cause

Impact

Recommendations

Prevention Plan

Step 8 – Risk Assessment

Risk Engine generates:

Severity:

Critical

Risk Score:
91/100

Confidence:
95%

Step 9 – Final Output

Dashboard Displays:

Root Cause

Timeline

Knowledge Graph

Recommendations

Risk Score

PDF Includes:

Executive Summary

Timeline

Root Cause

Recommendations

Prevention Plan
